NOV. 29, 1995

Dear Philip

Thank you for your reception report of CIGM radio, I have verified it to be accurate. Here is a little information about CIGM Radio. The station's transmitter site is located 10 kilometers south of Sudbury and consists of 6 towers used to develop separate day and night signal patterns for the station. Transmitter power remains constant at 50,000 watts day and night.

CIGM signed on the air broadcasting in C-QUAM AM stereo on May 18, 1990 with a country music format which has been very successful for the station to date. Thanks for your interesting report and happy DXing!

Yours Truly,

Scott Sloan
Engineering Department

P.S. Sorry for the slow response time.I've been waiting for our new bumper stickers to distribute with each new qsl report.
